PROFESSIONAL SUMMARY

Data and finance professional specialising in AI for Financial Information Processing, combining LLM integration, NLP-based document analysis, and financial domain expertise to turn large volumes of corporate text into scalable, decision-ready insight. Holds First Class Honours in Accounting & Finance and is completing doctoral research on AI adoption and disclosure quality. Proficient in Python, R, and Stata; experienced across UK and Chinese financial markets. Fluent in English and Mandarin. Targeting roles in data analytics, financial analysis, or reporting where AI and quantitative capability drive operational and commercial value.

KEY SKILLS

Financial Analysis	Financial statement analysis, management accounting, budgeting & variance analysis, UK GAAP / IFRS
Programming	Python (pandas, NumPy, scikit-learn, NLTK, HuggingFace Transformers), R (fixest, lfe, tidyverse), Stata, Excel (advanced)
AI & NLP	LLM integration (OpenAI API, LLaMA-3, DeepSeek R1, Mistral 7B), financial text intelligence, sentiment analysis, embedding similarity, text classification
Quantitative Methods	Causal impact evaluation, longitudinal financial data modelling, policy & behavioural effect analysis, regression-based forecasting
Data Sources	Compustat, CRSP, I/B/E/S, EDGAR / SEC filings, CSMAR (Chinese financial data)
Communication	Cross-functional stakeholder presentations, report writing, cross-cultural engagement; English (fluent), Mandarin Chinese (native)

EXPERIENCE

Financial Data Analyst (Doctoral Researcher)

Sep 2024 – Present

Essex Business School, University of Essex, Colchester, UK

- Built and deployed scalable NLP pipelines in Python to process thousands of corporate annual reports from EDGAR/SEC and CSMAR, automating extraction of disclosure characteristics to support reporting quality monitoring and cross-company benchmarking.
- Developed a multi-dimensional AI-targeting scoring system, integrating structural, sentiment, and embedding signals, to measure how listed firms adapt financial communication for AI readers; findings contribute to AI governance and disclosure transparency evaluation.
- Applied causal impact evaluation and longitudinal financial data modelling in R and Stata to assess how AI adoption affects reporting quality across listed firms, generating scalable analytical outputs to support evidence-based financial insight.
- Presented research findings at two academic conferences (2026), translating complex quantitative analysis into clear, actionable narratives for cross-functional audiences.

Undergraduate Teaching Support — Accounting Modules

2021 – 2023

Guangdong University of Foreign Studies, Guangzhou, China

- Delivered structured tutorial sessions in Management Accounting and Statistics, improving student comprehension of cost behaviour, budgeting, and variance analysis across diverse cohorts.
- Led targeted examination revision workshops that simplified complex accounting concepts and measurably reduced repeat-question rates in subsequent sessions.

LEADERSHIP & EXTRACURRICULAR

Deputy Director, Office of Academic Affairs — Student Union

2019 – 2021

Guangdong University of Foreign Studies, Guangzhou, China

- Coordinated and delivered a programme of guest lectures and research workshops, managing logistics and stakeholder communication across academic departments.
- Gained practical experience in project planning, team coordination, and institutional communication in a fast-paced student governance setting.

SELECTED RESEARCH PROJECTS

[P1] Algorithmic Accommodation in Corporate Disclosure

In preparation

- Investigated whether corporate managers strategically adapt disclosure language to optimise how LLMs (ChatGPT, DeepSeek) process and summarise their reports, with direct implications for AI governance and investor information quality.
- Built a three-dimensional scoring system using structural, sentiment, and LLM embedding signals; initial results show statistically significant cross-sector variation in AI-targeting behaviour.

Tools: Python, HuggingFace, OpenAI API.

[P2] AI Impact on Annual Report Disclosure — Chinese A-Listed Firms

2026

- Conducted large-scale automated analysis of annual reports across four disclosure dimensions (readability, boilerplate similarity, forward-looking content, tone) to quantify AI-driven shifts in financial communication efficiency.

Tools: Python (NLTK, pandas), Stata, CSMAR.

[P3] ESG Performance: Religion, Politics & Corporate Behaviour — US Firms

2023–2024

- Panel study (2012–2022) examining how regional religiosity and political ideology shape firm-level ESG performance across US-listed firms; applied policy and behavioural effect analysis to isolate institutional drivers.

Tools: Stata, Compustat, CRSP.

EDUCATION

Doctor of Philosophy (PhD) — Accounting

2024 – 2029 (in progress)

Essex Business School, University of Essex, Colchester, UK

- Research focus: AI and Machine Learning applications in financial accounting and corporate disclosure quality.
- Developed novel AI-targeting scoring system combining NLP, sentiment analysis, and LLM embedding methods to evaluate corporate disclosure behaviour at scale.
- Advanced training in statistical inference, causal impact evaluation, and longitudinal financial data modelling.
- Supervisors: Dr Hao Lan; Prof Henry Agyei-Boapeah (Essex Business School).

BSc Accounting and Finance — First Class Honours

2021 – 2023

University of Essex, Colchester, UK

- Core modules: Financial Reporting, Management Accounting, Corporate Finance, Auditing.
- Quantitative modules: Calculus, Linear Algebra, Probability & Mathematical Statistics.
- Dean's List 2022.

Diploma — Accounting and Finance (GPA: 3.8 / 4.0)

2019 – 2021

Guangdong University of Foreign Studies, Guangzhou, China

- Awards: Freshman Scholarship (2019), Academic Excellence Award, Outstanding Student Award.

PRESENTATIONS & CONFERENCES

Essex Business School PhD Annual Conference — Essex Business School

Jun 2026

PhD Sustainability Workshop — Essex Business School

May 2026

Presentation: ESG performance, religious background, and political affiliation.
